## Contents

$\mathbf{Pr}\mathbf{e}$	eface	·	VII
Pre	eface	to Second Edition	XI
1.	Inti	roduction	1
	1.1	Overview of Digital Signal Processing (DSP)	1
	1.2	FPGA Technology	3
		1.2.1 Classification by Granularity	3
		1.2.2 Classification by Technology	5
		1.2.3 Benchmark for FPLs	6
	1.3	DSP Technology Requirements	10
		1.3.1 FPGA and Programmable Signal Processors	11
	1.4	Design Implementation	12
		1.4.1 FPGA Structure	16
		1.4.2 The Altera EPF10K70RC240-4	19
		1.4.3 Case Study: Frequency Synthesizer	22
	Exe	rcises	27
2.	Cor	nputer Arithmetic	31
۷.	2.1	Introduction	31
	2.2	Number Representation	32
	2.2	2.2.1 Fixed-Point Numbers	$\frac{32}{32}$
		2.2.2 Unconventional Fixed-Point Numbers	35
		2.2.3 Floating-Point Numbers	47
	2.3	Binary Adders	50
	2.0	2.3.1 Pipelined Adders	52
		2.3.2 Modulo Adders	57
	2.4	Binary Multipliers	58
		2.4.1 Multiplier Blocks	62
	2.5	Binary Dividers	63
	2.0	2.5.1 Linear Convergence Division Algorithms	66
		2.5.2 Fast Divider Design	71
		2.5.3 Array Divider	76
	2.6	Floating point Arithmetic Implementation	76

		2.6.1 Fixed-point to Floating-point Format Conversion	77
		2.6.2 Floating-point to Fixed-point Format Conversion	79
		2.6.3 Floating-point Multiplication	80
		2.6.4 Floating-point Addition	81
		2.6.5 Floating-point Division	83
		2.6.6 Floating-point Reciprocal	85
		2.6.7 Floating-point Synthesis Results	86
	2.7	Multiply-Accumulator (MAC) and Sum of Product (SOP)	87
		2.7.1 Distributed Arithmetic Fundamentals	88
		2.7.2 Signed DA Systems	91
		2.7.3 Modified DA Solutions	92
	2.8	Computation of Special Functions Using CORDIC	94
		2.8.1 CORDIC Architectures	98
	$\mathbf{E}\mathbf{x}\mathbf{e}$	rcises	103
_		to a lab (PID) Distribution	
3.		ite Impulse Response (FIR) Digital Filters	
	3.1	Digital Filters	
	3.2	FIR Theory	
		3.2.1 FIR Filter with Transposed Structure	
	9.9	3.2.3 Linear-phase FIR Filters	
	3.3	Designing FIR Filters	
		3.3.1 Direct Window Design Method	
	9.4	3.3.2 Equiripple Design Method	
	3.4	Constant Coefficient FIR Design	
		3.4.1 Direct FIR Design	
		3.4.2 FIR Filter with Transposed Structure	
	T-3	3.4.3 FIR Filter Using Distributed Arithmetic	
	Exe	rcises	145
4.	Infi	inite Impulse Response (IIR) Digital Filters	147
	4.1	IIR Theory	
	4.2	IIR Coefficient Computation	
		4.2.1 Summary of Important IIR Design Attributes	
	4.3	IIR Filter Implementation	
		4.3.1 Finite Wordlength Effects	
		4.3.2 Optimization of the Filter Gain Factor	
	4.4	Fast IIR Filter	
		4.4.1 Time-domain Interleaving	
		4.4.2 Clustered and Scattered Look-Ahead Pipelining 1	
		4.4.3 IIR Decimator Design	
		4.4.4 Parallel Processing	
		4.4.5 IIR Design Using RNS	
	Evo	reisas	

5.	$\mathbf{M}\mathbf{u}$	ltirate	Signal Processing	. 175
	5.1	Decim	nation and Interpolation	
		5.1.1	Noble Identities	
		5.1.2	Sampling Rate Conversion by Rational Factor	. 178
	5.2	Polyp	hase Decomposition	. 179
		5.2.1	Recursive IIR Decimator	. 183
		5.2.2	Fast-running FIR Filter	. 184
	5.3	Hogen	auer CIC Filters	. 187
		5.3.1	Single-Stage CIC Case Study	. 187
		5.3.2	Multistage CIC Filter Theory	. 189
		5.3.3	Amplitude and Aliasing Distortion	. 194
		5.3.4	Hogenauer Pruning Theory	. 196
		5.3.5	CIC RNS Design	. 201
	5.4	Multis	stage Decimator	
		5.4.1	Multistage Decimator Design Using Goodman-Carey	
			Half-band Filters	
	5.5	-	ency-Sampling Filters as Bandpass Decimators	
	5.6	$\operatorname{Filter}$	Banks	
		5.6.1	Uniform DFT Filter Bank	
		5.6.2	Two-channel Filter Banks	
	5.7	Wavel	lets	
		5.7.1	The Discrete Wavelet Transformation	
	Exe	rcises .		. 237
6.	Fou	rier T	ransforms	. 241
	6.1	The $\Gamma$	Discrete Fourier Transform Algorithms	. 242
		6.1.1	Fourier Transform Approximations Using the DFT	. 242
		6.1.2	Properties of the DFT	. 244
		6.1.3	The Goertzel Algorithm	. 247
		6.1.4	The Bluestein Chirp-z Transform	. 248
		6.1.5	The Rader Algorithm	. 251
		6.1.6	The Winograd DFT Algorithm	. 257
	6.2	The F	ast Fourier Transform (FFT) Algorithms	. 259
		6.2.1	The Cooley-Tukey FFT Algorithm	
		6.2.2	The Good-Thomas FFT Algorithm	. 270
		6.2.3	The Winograd FFT Algorithm	
		6.2.4	Comparison of DFT and FFT Algorithms	
	6.3		er-related Transforms	
		6.3.1	Computing the DCT Using the DFT	
		6.3.2	Fast Direct DCT Implementation	
	$\operatorname{Exe}$	rcises .		. 283

7.1 Rectangular and Number Theoretic Transforms (NTTs) 7.1.1 Arithmetic Modulo 2 <sup>b</sup> ± 1 7.1.2 Efficient Convolutions Using NTTs 7.1.3 Fast Convolution Using NTTs 7.1.4 Multidimensional Index Maps and the Agarwal-Bun NTT 7.1.5 Computing the DFT Matrix with NTTs 7.1.6 Index Maps for NTTs 7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography 7.2.1 Basic Concepts from Coding Theory 7.2.2 Block Codes 7.2.3 Convolutional Codes 7.2.4 Cryptography Algorithms for FPGAs 7.3 Modulation and Demodulation 7.3.1 Basic Modulation Concepts 7.3.2 Incoherent Demodulation 7.3.3 Coherent Demodulation Exercises  8. Adaptive Filters 8.1 Application of Adaptive Filter 8.1.1 Interference Cancellation 8.1.2 Prediction 8.1.3 Inverse Modeling 8.1.4 Identification 8.2 Optimum Estimation Techniques 8.2.1 The Optimum Wiener Estimation 8.3 The Widrow-Hoff Least Mean Square Algorithms 8.3.1 Learning Curves 8.3.2 Normalized LMS (NLMS) 8.4 Transform Domain LMS Algorithms 8.4.1 Fast-convolution Techniques 8.4.2 Using Orthogonal Transforms 8.5 Implementation of the LMS Algorithm 8.5.1 Quantization Effects 8.5.2 FPGA Design of the LMS Algorithm 8.5.3 Pipelined LMS Filters 8.5.4 Transposed Form LMS Filter 8.5.5 Design of DLMS Algorithms 8.5.6 LMS Designs using SIGNUM Function	289
7.1.1 Arithmetic Modulo 2 <sup>b</sup> ± 1 7.1.2 Efficient Convolutions Using NTTs 7.1.3 Fast Convolution Using NTTs 7.1.4 Multidimensional Index Maps and the Agarwal-Bun NTT 7.1.5 Computing the DFT Matrix with NTTs 7.1.6 Index Maps for NTTs 7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography 7.2.1 Basic Concepts from Coding Theory 7.2.2 Block Codes 7.2.3 Convolutional Codes 7.2.4 Cryptography Algorithms for FPGAs 7.3 Modulation and Demodulation 7.3.1 Basic Modulation Concepts 7.3.2 Incoherent Demodulation 7.3.3 Coherent Demodulation Exercises  8. Adaptive Filters 8.1 Application of Adaptive Filter 8.1.1 Interference Cancellation 8.1.2 Prediction 8.1.3 Inverse Modeling 8.1.4 Identification 8.2 Optimum Estimation Techniques 8.2.1 The Optimum Wiener Estimation 8.3 The Widrow-Hoff Least Mean Square Algorithms 8.3.1 Learning Curves 8.3.2 Normalized LMS (NLMS) 8.4 Transform Domain LMS Algorithms 8.4.1 Fast-convolution Techniques 8.4.2 Using Orthogonal Transforms 8.5 Implementation of the LMS Algorithm 8.5.1 Quantization Effects 8.5.2 FPGA Design of the LMS Algorithm 8.5.3 Pipelined LMS Filters 8.5.4 Transposed Form LMS Filter 8.5.5 Design of DLMS Algorithms	
7.1.2 Efficient Convolutions Using NTTs 7.1.3 Fast Convolution Using NTTs 7.1.4 Multidimensional Index Maps and the Agarwal—Bur NTT 7.1.5 Computing the DFT Matrix with NTTs 7.1.6 Index Maps for NTTs 7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography 7.2.1 Basic Concepts from Coding Theory 7.2.2 Block Codes 7.2.3 Convolutional Codes 7.2.4 Cryptography Algorithms for FPGAs 7.3 Modulation and Demodulation 7.3.1 Basic Modulation Concepts 7.3.2 Incoherent Demodulation 7.3.3 Coherent Demodulation Exercises  8. Adaptive Filters 8.1 Application of Adaptive Filter 8.1.1 Interference Cancellation 8.1.2 Prediction 8.1.3 Inverse Modeling 8.1.4 Identification 8.2 Optimum Estimation Techniques 8.2.1 The Optimum Wiener Estimation 8.3 The Widrow—Hoff Least Mean Square Algorithms 8.3.1 Learning Curves 8.3.2 Normalized LMS (NLMS) 8.4 Transform Domain LMS Algorithms 8.4.1 Fast-convolution Techniques 8.4.2 Using Orthogonal Transforms 8.5 Implementation of the LMS Algorithm 8.5.1 Quantization Effects 8.5.2 FPGA Design of the LMS Algorithm 8.5.3 Pipelined LMS Filters 8.5.4 Transposed Form LMS Filter 8.5.5 Design of DLMS Algorithms	
7.1.3 Fast Convolution Using NTTs 7.1.4 Multidimensional Index Maps and the Agarwal-Bun NTT 7.1.5 Computing the DFT Matrix with NTTs 7.1.6 Index Maps for NTTs 7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography 7.2.1 Basic Concepts from Coding Theory 7.2.2 Block Codes 7.2.3 Convolutional Codes 7.2.4 Cryptography Algorithms for FPGAs 7.3 Modulation and Demodulation 7.3.1 Basic Modulation Concepts 7.3.2 Incoherent Demodulation 7.3.3 Coherent Demodulation Exercises  8. Adaptive Filters 8.1 Application of Adaptive Filter 8.1.1 Interference Cancellation 8.1.2 Prediction 8.1.3 Inverse Modeling 8.1.4 Identification 8.2 Optimum Estimation Techniques 8.2.1 The Optimum Wiener Estimation 8.3 The Widrow-Hoff Least Mean Square Algorithms 8.3.1 Learning Curves 8.3.2 Normalized LMS (NLMS) 8.4 Transform Domain LMS Algorithms 8.4.1 Fast-convolution Techniques 8.4.2 Using Orthogonal Transforms 8.5 Implementation of the LMS Algorithm 8.5.1 Quantization Effects 8.5.2 FPGA Design of the LMS Algorithm 8.5.3 Pipelined LMS Filter 8.5.5 Design of DLMS Algorithms	293
7.1.4 Multidimensional Index Maps and the Agarwal-Bun NTT.  7.1.5 Computing the DFT Matrix with NTTs.  7.1.6 Index Maps for NTTs.  7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography  7.2.1 Basic Concepts from Coding Theory  7.2.2 Block Codes  7.2.3 Convolutional Codes  7.2.4 Cryptography Algorithms for FPGAs  7.3 Modulation and Demodulation  7.3.1 Basic Modulation Concepts  7.3.2 Incoherent Demodulation  7.3.3 Coherent Demodulation  Exercises  8. Adaptive Filters  8.1 Application of Adaptive Filter  8.1.1 Interference Cancellation  8.1.2 Prediction  8.1.3 Inverse Modeling  8.1.4 Identification  8.2 Optimum Estimation Techniques  8.2.1 The Optimum Wiener Estimation  8.3 The Widrow-Hoff Least Mean Square Algorithms  8.3.1 Learning Curves  8.3.2 Normalized LMS (NLMS)  8.4 Transform Domain LMS Algorithms  8.4.1 Fast-convolution Techniques  8.4.2 Using Orthogonal Transforms  8.5 Implementation of the LMS Algorithm  8.5.1 Quantization Effects  8.5.2 FPGA Design of the LMS Algorithm  8.5.3 Pipelined LMS Filters  8.5.4 Transposed Form LMS Filter  8.5.5 Design of DLMS Algorithms	
7.1.5 Computing the DFT Matrix with NTTs. 7.1.6 Index Maps for NTTs. 7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography 7.2.1 Basic Concepts from Coding Theory 7.2.2 Block Codes 7.2.3 Convolutional Codes 7.2.4 Cryptography Algorithms for FPGAs 7.3 Modulation and Demodulation 7.3.1 Basic Modulation Concepts 7.3.2 Incoherent Demodulation 7.3.3 Coherent Demodulation Exercises  8. Adaptive Filters 8.1 Application of Adaptive Filter 8.1.1 Interference Cancellation 8.1.2 Prediction 8.1.3 Inverse Modeling 8.1.4 Identification 8.2 Optimum Estimation Techniques 8.2.1 The Optimum Wiener Estimation 8.3 The Widrow-Hoff Least Mean Square Algorithms 8.3.1 Learning Curves 8.3.2 Normalized LMS (NLMS) 8.4 Transform Domain LMS Algorithms 8.4.1 Fast-convolution Techniques 8.4.2 Using Orthogonal Transforms 8.5 Implementation of the LMS Algorithm 8.5.1 Quantization Effects 8.5.2 FPGA Design of the LMS Algorithm 8.5.3 Pipelined LMS Filters 8.5.4 Transposed Form LMS Filter 8.5.5 Design of DLMS Algorithms	
7.1.6 Index Maps for NTTs 7.1.7 Using Rectangular Transforms to Compute the DF 7.2 Error Control and Cryptography 7.2.1 Basic Concepts from Coding Theory 7.2.2 Block Codes 7.2.3 Convolutional Codes 7.2.4 Cryptography Algorithms for FPGAs 7.3 Modulation and Demodulation 7.3.1 Basic Modulation Concepts 7.3.2 Incoherent Demodulation 7.3.3 Coherent Demodulation Exercises  8.
